

Unit 5

Lesson 3

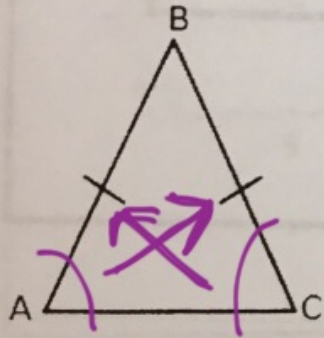

Triangle Theorems

Created with Doceri

Triangle Sum Theorem: The sum of the measures of the angles of a triangle is 180°.

Remember: An **ISOSCELES TRIANGLE** is a 3-sided polygon with at least 2 congruent sides.

Label the vertex angle, the base angles, the legs and the base of the isosceles triangle.

$\angle B$ $\angle A$ \overline{AB} \overline{AC}
 $\angle C$ $\angle C$ \overline{CB} or
 \overline{CA}

If two sides of a triangle are congruent, then the angles opposite those sides are congruent:

In $\triangle ABC$: if $\overline{AB} \cong \overline{CB}$, then $\angle A \cong \angle C$.

If two angles of a triangle are congruent, then the sides opposite those angles are congruent:

In $\triangle ABC$: if $\angle A \cong \angle C$, then $\overline{AB} \cong \overline{CB}$.

If two **angles** of a triangle are congruent, then the **sides** opposite those angles are congruent:

In $\triangle ABC$: if _____ \cong _____, then _____ \cong _____.

Remember: An **EQUILATERAL TRIANGLE** is a 3-sided polygon with all 3 congruent sides.

If a triangle is equilateral, then it is equiangular.

If a triangle is equiangular, then it is equilateral.

Each angle of an equilateral triangle measures 60°.

1. Find the value of x:

$$x = 52$$

2. Find the value of x:

$$8x - 16 = 72$$

$$\begin{array}{r} +16 \\ +16 \end{array}$$

$$\frac{8x}{8} = \frac{88}{8}$$

$$x = 11$$

3. Find the value of x and y:

$$\frac{3x}{3} = \frac{180}{3}$$

$$x = 60^\circ$$

$$y + 3 = 10$$

$$\begin{array}{r} -3 \\ -3 \end{array}$$

$$y = 7$$

Exterior Angle Theorem: The measure of an exterior angle of a triangle is equal to the sum of the measures of the two remote interior angles.

$$m\angle A = m\angle C + m\angle D$$

$\angle A$ & $\angle B$ are supplementary

$$180 - B = A$$

1. Find the measure of x :

$$x = 60 + 50$$

$$x = 110^\circ$$

2. Find the measure of x :

$$180 - 92 = 88$$

$$x = 36 + 52 = 88$$

3. Find the value of x :

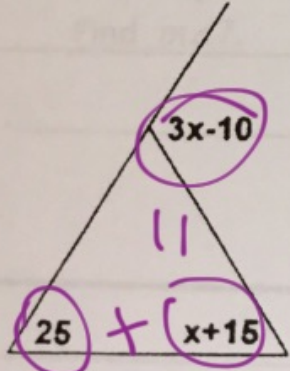

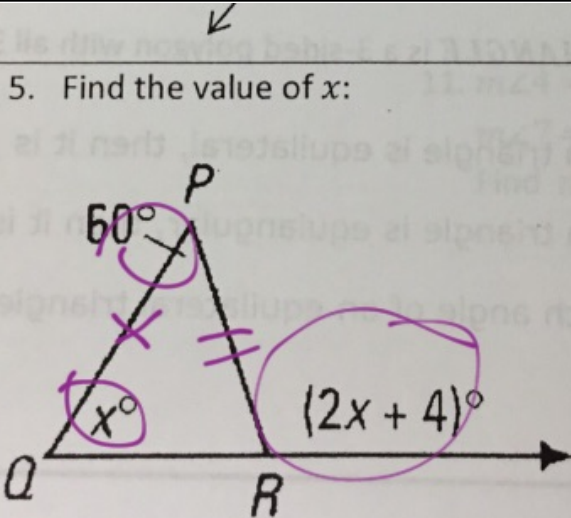

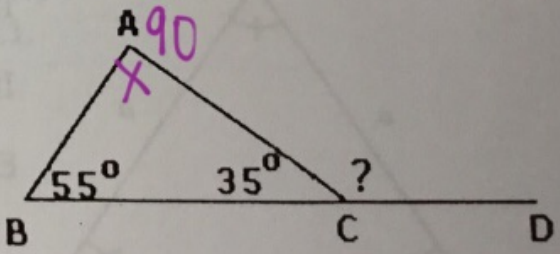

$$105 = 5x + 2x$$

$$\frac{105}{7} = \frac{7x}{7}$$

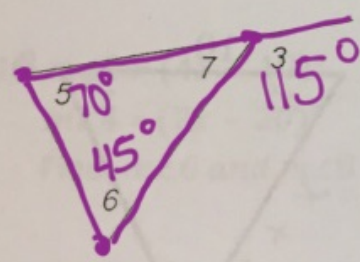

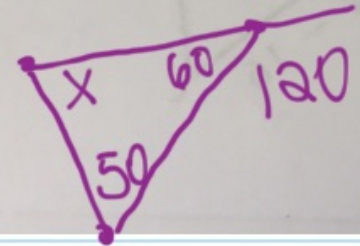

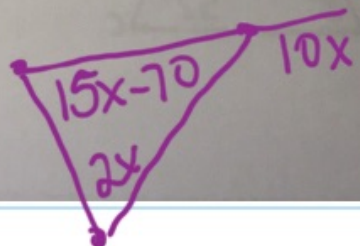

$$x = 15$$
